## **Acknowledgement**

We would like to thank K.J. Somaiya College of Engineering for giving us this in-house internship. We express our gratitude towards Professor Sandeep Sainkar for giving us this opportunity and his valuable guidance. We would like to thank Professor Shilpa Vatar for allowing us to perform internship under embedded systems based on C Programming and helping us to select the related topics and projects. We would also thank EXTC HOD Professor Amey Naik and Principal Dr. Shubha Pandit for creating such opportunities. Each of us have studied the concept through various information sources and tried our best to make this internship successful.

### **Students involved:**

- ❖ Sankalp Jain (EXTC B) 1813084
- ❖ Viraj Jedhe (EXTC B) 1813085

## **1.Aim:**

- ✓ To learn more about embedded systems.
- ✓ To learn to code based on C Programming Language  
based on flowcharts and algorithms.
- ✓ To learn how to work on mini projects and debug it.
- ✓ To learn how to divide projects in small modules and  
work on it.

## **2. Abstract**

The Indian Railways (IR) carries about 5.5 lakhs passengers in reserved accommodation every day. The Passenger Reservation System (PRS) facilitates the booking and cancellation of tickets from any of the 4000 terminals (i.e. PRS booking window all over the countries). These tickets can be booked or cancelled for journeys commencing in any part of India and ending in any other part, with travel time as long as 72 hours and distance upto several thousand kilometers. In the given project we will be developing a user-friendly portal which will help users to log in to their personalized accounts and sign in where they can make new account by giving their phone number, user name and their password based on their choice and find train details, book and get display of final ticket and a program to book a railway ticket which can allow user to input date of travel, starting and ending location of the journey, selecting the different trains available with the preferred type of the class they want including the passenger details is to be created. With the help of railway reservation system people can book their tickets online through internet, sitting in their home by a single click of mouse.

### **3.Introduction**

In these project we have made a program based on embedded system in C programming on topic Railway Reservation System. In these project first the user have to log in using username: testcase1

And password:password created by us as a default account for log in as a test case for us . And a new user can click on sign up and give their user name, password ,phone number and set up a new account.

Now the user can book their ticket from the personalized account safe from threats. It is a user-friendly program. Now you have to give month of travel as asked by the programmer and after giving that we have to give date of travel and then select

**K. J. Somaiya College of Engineering,  
Mumbai-77**

(Autonomous College Affiliated to University of Mumbai)

boarding station and then destination station as per our need. And after that we get different options of trains matching our choices. After selecting desired train we have to select the class in which we have to go from available options which are given along with their prices. After this we have to select no of passengers and give their details as asked by program. After these your final ticket get displayed along with the booking status and all the necessary details given by you. In this program all the test cases are considered and we have tried to remove all the bugs and tried to make a user friendly portal.

## **4. Input Specifications**

1. Will the user login or sign up?
2. What will be the date of travel?
3. What will be the start and end locations available?
4. What will be the number of trains available for ticket booking?
5. Will the cost vary for different locations? Or Will it be the same for all?
6. How many passengers will travel?

## **5. Output Specifications**

1. What format is the Boarding Date Displayed as?
2. What way is the passenger details displayed?
3. How is the Seat Number displayed?
4. How is the cost of the ticket displayed?
5. Is it necessary to display the train name?
6. Where should the class be displayed?
7. What details of the passenger must be displayed?

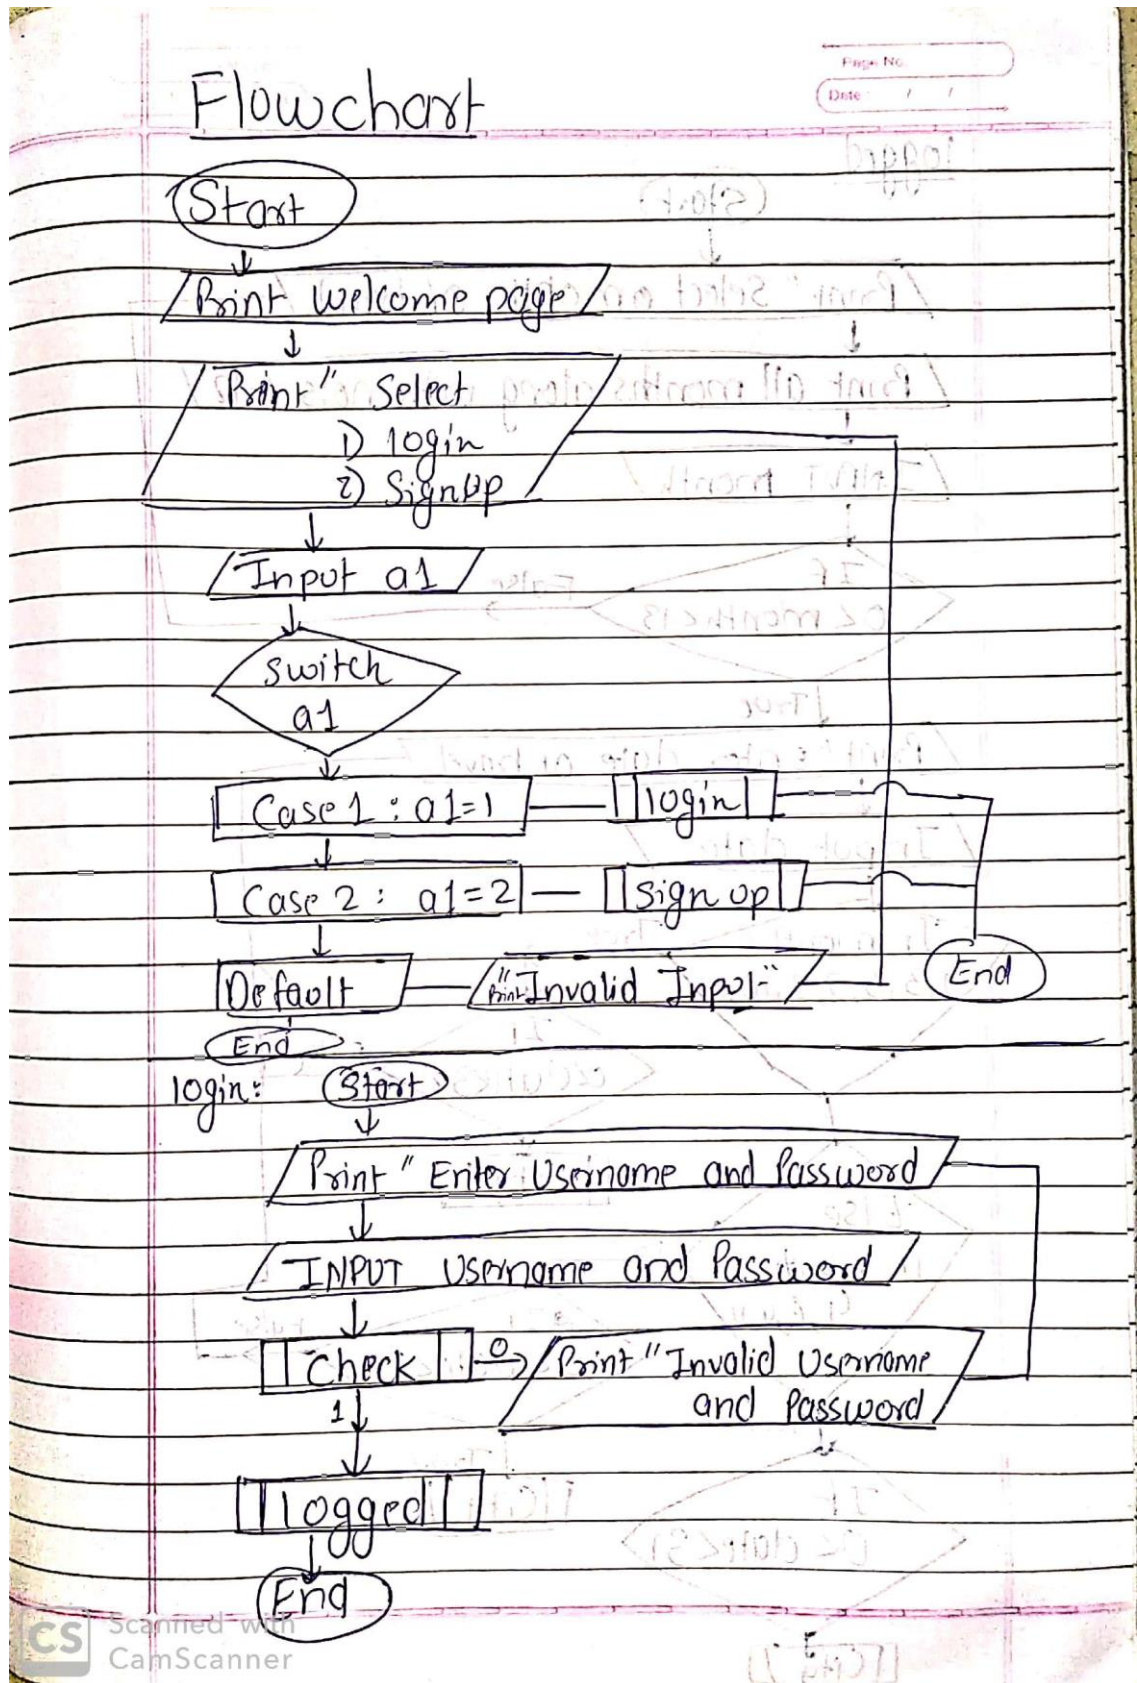

## **5. Flowchart**

=====

Train Name: Mumbai Rajdhani

Boarding Date: 1 / 1 / 2019

Class: AC

Ticket Charge: 5400

Booking Status: Confirmed

Passenger/s Details :

Passenger Name : Sankalp Jain

Passenger Age : 19

Seat Number : 15

Passenger Name : Viraj Jedhe

Passenger Age : 19

Seat Number : 16

## **7.Conclusion:**

From this project we learn to code mini projects by dividing into small modules . We learn to debug it .We learn to code for competitions like hackathon. It helps us to code in competitive manner. And it also increases our coding speed .It makes us superior over other in coding .It is necessary in todays IT world and we can't avoid it. We also learn the use of embedded systems in our daily life .We also learn in better way in project based studies than theoretical studies. We also learn the use of array, functions, switch loop ,for loop ,if else loop ,modularity in program and c programming in better way.
